PROFESSIONAL SUMMARY

Results-driven Data Analyst with hands-on experience in SQL querying, Power BI dashboard development, data modeling, and data warehousing. Skilled in transforming complex datasets into actionable insights to support data-driven decision-making. Proficient in Python, statistical analysis, and building scalable BI solutions for cross-functional stakeholders.

PROFESSIONAL EXPERIENCE

Data Science Lead & Data Analyst | Codeniet (Early-Stage Startup) 2026 – Present

- Designed and maintained end-to-end data pipelines and warehousing frameworks, reducing data processing time by 30% and enabling scalable, organization-wide analytics.
- Built Power BI dashboards tracking key KPIs across departments; directly supported data-driven decision-making for leadership teams.
- Deployed machine learning models using Python (Scikit-learn, TensorFlow) to solve complex business problems and reduce operational inefficiencies by 25%.

Freelance Data Analyst & Business Intelligence | Self-Employed Jan 2025 – Present

- Developed 10+ interactive Power BI dashboards surfacing KPIs and trends, enabling faster client decision-making and reducing manual reporting time by 40%.
- Authored advanced SQL queries — CTEs, window functions, subqueries, and multi-table joins — to extract, clean, and transform raw data into analysis-ready formats.
- Structured and warehoused client datasets using best-practice data modeling techniques; delivered visual reports adopted by 5+ clients across industries.

KEY PROJECT

Explainable Deepfake Detection using Frame-Level Analysis + Grad-CAM — Lead Developer

- Built an automated data pipeline to collect, preprocess, and warehouse large-scale video frame datasets (50,000+ frames) for model training and validation.
- Implemented Grad-CAM visualization to communicate ML model decisions to non-technical stakeholders; achieved 94% classification accuracy using Python and TensorFlow.
- Applied statistical analysis techniques to evaluate model performance, generating visual reports in Matplotlib/Seaborn for stakeholder review.

TECHNICAL SKILLS

Analytics & BI:	Power BI, Tableau (basic), Google Looker Studio, KPI Dashboard Development, Data Storytelling
Data & SQL:	Advanced SQL, CTEs, Window Functions, Joins, Data Modeling, Data Warehousing, ETL Pipelines
Programming:	Python, Pandas, NumPy, Scikit-learn, TensorFlow/Keras, Statistical Analysis
Tools:	Excel (VLOOKUP, Pivot Tables), Matplotlib, Seaborn, Git/GitHub, Jupyter Notebook

EDUCATION & CERTIFICATIONS

B.Tech in Information Technology — Dr. M.G.R. Educational and Research Institute 2022 – 2026 | GPA: 7.18

Certifications: Python for Data Science – NPTEL (2024) | Data Science Using R – Enlight Wisdom (2023)
